

NAVEX ESG™ Resource Footprint

All Your Sustainability Data – in One Place

Today's corporate and regulatory landscape calls for decision-useful, easily collected information about business impact on society and the environment. But with Environmental, Social, Governance (ESG) data living across multiple areas of the organisation – how can you easily collect, consolidate, and analyse your ESG key performance indicators (KPIs)?

NAVEX ESG provides the data you need to manage ESG risks and opportunities:

- Automatically acquire utility bill data across water, waste, electricity, natural gas, and more
- Calculate greenhouse gas (GHG) footprints across Scopes 1, 2, and 3
- Set targets and visualise performance against goals
- Easily export results to support reporting and disclosure

Create a shared vision of ESG progress

Traditionally, sustainability teams focused on minimising harm to the environment, while maximising a brand's capacity to 'do good'. Now, heightened investor and regulator focus is driving a convergence of compliance, risk, and sustainability. Organisations need to demonstrate how non-financial factors impact enterprise value and risk.

These KPIs – both qualitative and quantitative – need to be easily auditable to provide confidence and assurance. NAVEX ESG provides an aggregated set of key ESG data that you can use to make decisions, improve your ESG profile, and report out to stakeholders.

Time spent 'configuring' is time wasted

- Non-specialised ESG software providers want you to create your own system
- Manual spreadsheets lack efficiency and dynamic analysis
- ESG management requires analysis and action, not systems administration

- You need software that is data-ready to provide you a roadmap for action
- NAVEX ESG is designed by long-time experts in sustainability, risk, and compliance
- Innovation across ESG, GRC, and Risk Management is a focal point our strategy

Your ESG strategy hub

Developing an effective ESG programme goes beyond data collection. You need to be able to set goals, see progress, and communicate with team members who can generate results. Used with NAVEX One solutions, you can turn your ESG plans into action.

Are you looking to improve supplier ESG performance? Measure your current states, set goals, and implement the corrective actions and policies that will help you achieve real results. It all starts here.

You can move your plans into action, and go beyond meetings, committees, and dashboarding to truly make an impact for your stakeholders.

Innovate Your Approach to GRC, Risk, and ESG

The NAVEX One platform enables you to create a modern governance, risk, and compliance (GRC) programme. One that helps you manage risks across the spectrum of legal, business, sustainability, and employees. NAVEX ESG is a core component of your modern GRC strategy and can be used to help develop a holistic programme that mitigates risk and creates value.

Prioritise	Manage	Disclose
Identify Risks	Set Goals	Annual Reports
Create Value	Collect Data	Standards Boards
Unify Stakeholders	Measure Progress	Regulations
