The NAVEX IRM™ Platform for IT Risk Management

A Holistic Approach to Efficiently Managing IT Risk

IT Landscape

IT threats are everywhere and growing daily. These threats endanger your company's assets and run your IT department ragged. Incidents require investigation and remediation, while vulnerability data piles up waiting for analysis.

Making the IT department's task even tougher is the rise in cyber risk. This threat to business comes in not just through the IT door but also into every cubicle and corner office. The danger is real, ever-present, and profound, potentially impacting the bottom line, reputation and even disrupting operations.

What you need is a disruptive force of your own – a technology solution that empowers everyone and every process involved with IT risk management.

Manage IT Risk Like a Pro

The NAVEX IRM platform simplifies the identification, analysis, mitigation, and management of IT risks. It facilitates managing governance and compliance efforts while providing a repository for storing and sharing policies, procedures, controls and regulatory obligations. Users can map IT risks to business risks for an enterprise-wide view of risk. NAVEX IRM's reporting capabilities enable users to quickly produce data-rich, visual reports for management audiences.

Cyber risk? NAVEX IRM manages and triages IT scanner data by offering 30-plus connectors. Users then have a single view of all system scans, so severe or critical findings can be addressed first. NAVEX IRM also deduplicates scan results, so you only see what has changed or what is new, which is a tremendous timesaver.

NAVEX IRM can escalate threats to levels of authority within the company. Incidents managed in NAVEX IRM are given due diligence, from root cause analysis and mitigation to record-keeping and archiving.

As threats continue to grow, IT has to adapt and change to meet the challenge. NAVEX IRM is the technology solution that enables you to manage everything related to IT risk.

Workflow vs. Spreadsheets

Many companies still use spreadsheets for compliance and risk management activities. Spreadsheets fall short with the collaboration required with IT risk management.

NAVEX IRM's workflow allows for collaboration across departments or the globe. Issues and incidents can be escalated or managed with notifications through workflow. What's more, in NAVEX IRM, everything is linked and associated, from scan data and regulation citations to controls and policies. Spreadsheets can't do that.

Manage IT Risk With NAVEX IRM

With IT threats seeming to come from everywhere and growing daily, IT needs NAVEX IRM to better manage IT risks, do more with less, and keep the focus on results.

■ NAVEX IRM's Approach to IT Risk Management

Compliance and Policy Management

NAVEX IRM's unified repository stores compliance mandates, policies, controls and more.

Control Library and Mapping

In NAVEX IRM, controls are mapped to regulations, standards, even contracts, so requirements can be followed.

Reporting

NAVEX IRM's intuitive drag-and-drop reporting engine allows you to produce adhoc reports in real time. You can also create interactive and permission-based dashboards. With either, no coding is required.

Risk Assessments

From NAVEX IRM, you can issue risk assessments, score risks on a user-defined scale and schedule automatic reminders.

Incident Management

Incidents are managed and recorded through every stage of the remediation process.

Workflow

Workflow connects individuals and departments with communications that instruct or direct.

Controlled Access

NAVEX IRM allows thousands of users with limited access. You control who sees what.
